## Newton's Second Law <br> Lesson Notes

## Newton's Second Law:

The acceleration of an object is ...

- Directly proportional to the net force that acts upon it, and
- Inversely proportional to the mass of the object, and
- In the same direction as the net force.

## Acceleration and Net Force

- Double $F_{\text {net }} \Rightarrow$ Double a
- Triple $\mathrm{F}_{\text {net }} \Rightarrow$ Triple a
- Halve $F_{\text {net }} \Rightarrow$ Halve a
- By whatever factor $\mathbf{F}_{\text {net }}$ is changed, $\mathbf{a}$ is changed by th $\epsilon$

|  | $F_{\text {net }}(N)$ | $\mathrm{a}\left(\mathrm{m} / \mathrm{s}^{2}\right)$ |
| :---: | :---: | :---: |
| 1 | 20.0 | 4.0 |
| 2 | 40.0 | 8.0 |
| 3 | 60.0 | 12.0 |
| 4 | 10.0 | 2.0 |
| 5 | 5.0 |  |
| 6 | 30.0 |  |
| 7 | 80.0 |  |

Your Turn to Practice $\quad a \alpha F_{\text {net }}$

1. An object has an acceleration of $16.0 \mathrm{~m} / \mathrm{s} / \mathrm{s}$. If the net force acting upon this object were doubled, then its new acceleration would be $\qquad$ $\mathrm{m} / \mathrm{s} / \mathrm{s}$.
2. An object has an acceleration of $16.0 \mathrm{~m} / \mathrm{s} / \mathrm{s}$. If the net force acting upon this object were tripled, then its new acceleration would be $\qquad$ $\mathrm{m} / \mathrm{s} / \mathrm{s}$.
3. An object has an acceleration of $16.0 \mathrm{~m} / \mathrm{s} / \mathrm{s}$. If the net force acting upon this object were halved, then its new acceleration would be $\qquad$ $\mathrm{m} / \mathrm{s} / \mathrm{s}$.
4. An object has an acceleration of $16.0 \mathrm{~m} / \mathrm{s} / \mathrm{s}$. If the net force acting upon this object were $1 / 3$ the original value, then its new acceleration would be $\qquad$ $\mathrm{m} / \mathrm{s} / \mathrm{s}$.

Acceleration and Mass

- Double $m \Rightarrow$ Halve a
- Triple $m \Rightarrow$ One-third a
- Halve $m \Rightarrow$ Double a
- By whatever factor $\mathbf{m}$ is changed, $\mathbf{a}$ is changed by the reci

|  | 3 | 12.0 | 4.0 |
| :---: | :---: | :---: | :---: |
|  | 4 | 2.0 | 24.0 |
|  | 5 | 1.0 |  |
| Use the above to fill in the missing table cells. | 6 | 6.0 |  |
|  | 7 | 16.0 |  |

Your Turn to Practice a $\alpha 1 / \mathrm{m}$

1. An object has an acceleration of $16.0 \mathrm{~m} / \mathrm{s} / \mathrm{s}$. If the mass of this object were doubled, then its new acceleration would be $\qquad$ $\mathrm{m} / \mathrm{s} / \mathrm{s}$.
2. An object has an acceleration of $16.0 \mathrm{~m} / \mathrm{s} / \mathrm{s}$. If the mass of this object were tripled, then its new acceleration would be $\qquad$ $\mathrm{m} / \mathrm{s} / \mathrm{s}$.
3. An object has an acceleration of $16.0 \mathrm{~m} / \mathrm{s} / \mathrm{s}$. If the mass of this object were halved, then its new acceleration would be $\qquad$ $\mathrm{m} / \mathrm{s} / \mathrm{s}$.
4. An object has an acceleration of $16.0 \mathrm{~m} / \mathrm{s} / \mathrm{s}$. If the mass of this object were $1 / 3$ the original value, then its new acceleration would be $\qquad$ $\mathrm{m} / \mathrm{s} / \mathrm{s}$.
